NOVAGAIA

Whitepaper V2.0

Protect. Research. Learn.

Version: 2.0

Status: Public project overview and framework

Website: https://novagaia-jade.vercel.app/

Network: Solana

Last updated: 28 September 2026

Important Notice

This document describes NovaGaia's mission, research principles, current website disclosures, token information, and intended development direction. It is informational and educational. It is not financial, investment, legal, tax, or security advice, and it is not an offer or solicitation to buy or sell any digital asset.

Cryptoassets are volatile and may become illiquid or lose all value. Token allocations, wallet balances, market conditions, project features, and regulatory requirements can change. Readers should verify contract addresses and on-chain information independently, review current official communications, and make their own decisions.

A NovaGaia warning is a signal to investigate—not an instruction to buy or sell.

1. Executive Summary

NovaGaia is a community-driven crypto intelligence and education ecosystem focused on research, transparency, collective intelligence, and scam awareness. Its purpose is to help people navigate crypto with greater awareness by gathering information, examining evidence, documenting potential risks, and teaching practical research habits.

NovaGaia's core identity is not defined solely by its token. The ecosystem is built around a mission: **Protect. Research. Learn.** NVGAI is an ecosystem token within that broader mission. NovaPX1 is the Guardian identity associated with the ecosystem and has its own separately identified Solana token contract.

NovaGaia's public-facing intelligence framework is called **Operation Blacklist**. Its guiding principle is: **"We don't blacklist people. We document evidence."** Reports are leads for review, not automatic proof of wrongdoing. Findings should distinguish verifiable facts from interpretation, acknowledge uncertainty, and be updated when credible new evidence appears.

This whitepaper separates current public website disclosures and existing project components from frameworks, systems, and utilities that remain under development or are future intentions.

2. Identity, Mission, and Vision

Category: Community-driven crypto intelligence & education

Mission: To build a trusted community that helps people navigate crypto safely through education, research, transparency, and collective intelligence.

Vision: To become a trusted global community for crypto intelligence, education, and scam awareness.

Tagline: Protect. Research. Learn.

Core philosophy: Don't trust the hype. Verify the evidence.

Community promise:

- We investigate before we accuse.
- We educate before we judge.
- We verify before we amplify.

NovaGaia does not aim to tell people which cryptocurrencies to buy or sell. It aims to help people ask better questions, assess available information, identify potential warning signs, recognize uncertainty, and make their own informed decisions.

3. The Problem NovaGaia Addresses

Crypto users encounter fast-moving claims, opaque token structures, misleading promotions, impersonation, phishing, wallet-draining attempts, thin liquidity, and incomplete or conflicting information. Social-media attention can spread claims faster than they can be checked.

NovaGaia's response is a community-oriented process that values:

- Evidence over hype.
- Verification over repetition.
- Education over fear.
- Context over isolated signals.
- Corrections over defensiveness.
- Contribution and trust over popularity.

A single warning sign rarely tells the whole story. A newly created website, an anonymous team, concentrated token holdings, or a volatile market can warrant scrutiny, but none alone automatically proves fraud. Context and evidence matter.

4. The NovaGaia Ecosystem

The ecosystem's intended components are complementary:

- **Website:** Public home for NovaGaia's identity, educational content, project information, token disclosures, threat-report submission, and public Operation Blacklist introduction.
- **Operation Blacklist:** The public investigation framework for receiving, reviewing, documenting, and updating potential threat reports.
- **NovaGaia Risk Score:** A structured framework for describing observable risk indicators, with evidence confidence reported separately.

- **Threat Intelligence Database:** The intended body of documented cases, evidence, assessments, updates, and investigation history. The existence of a working internal report/admin system does not mean a complete public, searchable database is already available.
- **Community:** A place for discussion, learning, collaboration, and contributions.
- **X and Telegram:** Public communications and community participation channels.
- **NovaPX1:** The Guardian identity and mascot associated with protection and awareness.
- **NVGAI:** An ecosystem token, not the entirety of NovaGaia.

The long-term product direction is to connect community observations, education, research, evidence, and technology into a useful intelligence ecosystem.

5. Operation Blacklist

5.1 Purpose

Operation Blacklist is NovaGaia's public threat-intelligence framework for identifying, investigating, documenting, and educating the community about potential crypto threats. Its formal system name is the **NovaGaia Threat Intelligence Database**.

Its central rule is:

> *We don't blacklist people. We document evidence.*

The framework is designed to document potential risks and observable conduct—not to encourage harassment, retaliation, or unsupported accusations.

5.2 Investigation Workflow

The official workflow is:

1. Report — A potential threat is submitted with relevant context and supporting material.
2. Triage — The report is checked for relevance, clarity, and enough information to investigate.
3. Investigate — Available on-chain, off-chain, technical, documentary, and community evidence is examined.
4. Risk Assess — Observable indicators are assessed using the applicable NovaGaia framework.
5. Review — Findings are reviewed before publication whenever independent review is practical.
6. Publish — Findings may be published with their supporting evidence and limitations.
7. Response — Relevant responses, corrections, or additional information are considered.
8. Update — Reports may be corrected, downgraded, escalated, or updated as evidence changes.

A report is a starting point, not a verdict. Submission does not guarantee that a case will be investigated or published.

5.3 Evidence and Documentation

Depending on the case, relevant material may include:

- Token and contract addresses, token configuration, and publicly observable on-chain data.
- Transaction signatures, wallet movements, holder distribution, and liquidity information.
- Project websites, public documentation, official statements, and public social accounts.
- Promotional claims, partnership claims, and disclosures of compensation.
- Screenshots, archived pages, timestamps, and source links.
- User-submitted descriptions and first-hand reports.

Investigators should preserve source context and distinguish original evidence from summaries or interpretations. Sensitive personal information should not be published unless there is a clear, lawful, and necessary reason. Evidence collection and retention should follow applicable law and reasonable privacy safeguards.

5.4 Publication, Response, and Corrections

When practical, the subject of an investigation should have an opportunity to respond before publication. A response is information to assess; it is neither automatic exoneration nor automatic evidence of wrongdoing.

Published records should identify what is known, what is alleged, what could not be verified, and when the assessment was last reviewed. Corrections should be made when material errors are found. Where feasible, the history of substantive updates should remain available so readers can understand how conclusions changed.

5.5 Risk Labels

The public Operation Blacklist framework describes these labels:

- **Low Concern:** No significant concerns identified from the information reviewed.
- **Watch:** Some warning indicators require attention.
- **High Risk:** Multiple significant risk indicators identified.
- **Critical:** Strong evidence of an immediate threat.
- **Confirmed Fraud:** Reserved for cases with strong, verifiable evidence of fraudulent activity.

These labels describe the framework's intended categories. They should only be applied to a case after evidence review appropriate to the seriousness of the label. A numerical score and a case-status label are not interchangeable. "Confirmed Fraud" requires a substantially higher evidentiary threshold than a report or risk indicator.

5.6 Seven Permanent Principles

9. Evidence before accusation.
10. Separate facts from interpretation and opinion.
11. Seek independent review whenever possible.
12. Give the subject an opportunity to respond when practical.
13. Correct, downgrade, escalate, or update reports when warranted.
14. Never accept payment to remove or manipulate an investigation.
15. Protect and educate; do not harass, retaliate, or provide financial instructions.

6. NovaGaia Risk Score V1.0

NovaGaia's documented baseline is a 100-point framework. It assesses observable risk indicators; it is not, by itself, a determination of fraud or an investment recommendation.

6.1 Categories and Weights

Category	Maximum points
Contract & Token Controls	20
Holder Distribution	15
Liquidity & Exit Risk	15
Team & Transparency	10
Website & Infrastructure	10
Marketing & Promotion	10
Community Behavior	10

On-Chain Behavior	10
Total	100

Higher scores indicate more or more significant documented risk indicators under the methodology. A score should not be produced by blindly counting red flags. The importance, reliability, context, and relationship of each finding matter.

6.2 Score Bands

Score	Classification	Meaning
0–19	Low Concern	No significant risk indicators identified from available evidence.
20–39	Watch	Some warning indicators exist.
40–59	High Risk	Multiple meaningful risk indicators identified.
60–79	Critical	Serious risk indicators warrant substantial caution and investigation.
80–100	Severe	Extensive risk indicators warrant escalation and review.

The Risk Score's five numerical bands are not identical to the public Operation Blacklist labels. In particular, a score does not automatically justify the label "Confirmed Fraud."

6.3 Evidence Confidence

Evidence confidence is a separate dimension:

- **High:** Multiple independent pieces of evidence support the findings.
- **Medium:** Some evidence exists, but important information remains uncertain.
- **Low:** Information is limited or unverified.

A risk score should be presented alongside evidence confidence and an explanation of material unknowns. Strong evidence is not itself a reason to increase a subject's risk score; it affects confidence in the assessment.

6.4 Assessment Areas

Contract & Token Controls (20): Review relevant token authorities, configuration, extensions, transfer restrictions, and unusual or potentially harmful behavior. For Solana assets, assess the actual configuration where it can be verified.

Holder Distribution (15): Review top holders, related wallets, team or developer wallets, liquidity-related addresses, and other relevant concentrations. Holder percentages require context; concentration alone does not prove manipulation.

Liquidity & Exit Risk (15): Review available liquidity, liquidity relative to market capitalization, pool control, lock or burn information where applicable, liquidity changes, trading conditions, and potential exit constraints.

Team & Transparency (10): Examine the verifiability and consistency of team and project claims, documentation, disclosures, and responses to reasonable questions. An anonymous team is not automatically fraudulent.

Website & Infrastructure (10): Examine impersonation, suspicious redirects, phishing indicators, copied material, misleading claims, and other observable technical signals. A poor website design alone is not proof of fraud.

Marketing & Promotion (10): Examine guaranteed-return claims, unsupported promises, fake endorsements or partnerships, undisclosed paid promotion, and materially misleading statements.

Community Behavior (10): Consider documented manipulation, fake engagement, intimidation, deceptive recruitment, or suppression of legitimate questions. Disagreement, criticism, profanity, or an unpopular opinion alone should not generate a high score.

On-Chain Behavior (10): Review relevant transfers, wallet relationships, distribution patterns, liquidity movements, and transaction timing. Interpret behavior in context rather than treating token ownership or a single transfer as proof of misconduct.

6.5 Critical Flags and Missing Data

Some indicators should trigger prompt investigation regardless of the aggregate score, including potential phishing, wallet drainers, active impersonation, fake investment platforms, and malicious contract behavior. A flag is a reason for urgent review; it should still be supported by evidence.

When information cannot be verified, record it as **Unknown**, **Data unavailable**, or **Unable to independently verify**. Missing information should not automatically be treated as proof of wrongdoing or assigned the maximum risk.

6.6 Limitations

Risk scoring depends on data availability, source reliability, investigator judgment, and the time of assessment. On-chain analysis may miss off-chain arrangements or relationships; public data can be incomplete; token configuration and liquidity can change; and automated tools can produce false positives or miss malicious behavior. Scores should include the assessment date and should be revisited when material new information appears.

7. Promoter Risk Assessment Framework

NovaGaia's working framework for assessing promotional conduct separates **behavioral risk** from **evidence confidence**. It should assess documented behavior—not popularity, allegations alone, disagreement, or the mere fact that a promoter received compensation.

7.1 Behavioral Risk — 85 points

Category	Maximum points
Promotion History	15
Project Due Diligence	15
Misleading Claims	15
Transparency & Disclosure	10
Promotion Pattern	10
Financial Incentives	10
Community Conduct	10
Total behavioral risk	85

7.2 Evidence Confidence — 15 points

Evidence Strength is reported separately, from 0 to 15. It should not be added to behavioral risk in a way that makes stronger evidence itself increase the risk score.

Behavioral score	Label
0–20 / 85	Low Risk
21–40 / 85	Moderate Risk

41–60 / 85	High Risk
61–85 / 85	Critical Risk

Evidence confidence bands:

- **0–3:** Very Limited Evidence
- **4–6:** Limited Evidence
- **7–9:** Moderate Evidence
- **10–12:** Strong Evidence
- **13–15:** Very Strong Evidence

A promoter assessment describes documented indicators of conduct. It is not a declaration that a person is a scammer or has committed fraud. Compensation is not itself misconduct; disclosure, claims, conduct, and context are what matter.

8. Research Ethics and Accountability

NovaGaia's credibility depends on applying its standards to its own work.

- **Evidence first:** Keep source material and reasoning clear enough to be reviewed.
- **Fairness:** Distinguish allegation, verified fact, inference, and opinion.
- **Proportionality:** Match the strength of language to the strength of evidence.
- **Opportunity to respond:** Seek a response when practical and relevant.
- **Corrections:** Correct errors and update outdated assessments.
- **Independence:** Avoid conflicts of interest and disclose material relationships.
- **No pay-to-clear:** Never sell removal, suppression, favorable scores, or favorable findings.
- **No guaranteed safety:** A low-risk assessment is not a guarantee that a project is safe.
- **Privacy:** Avoid unnecessary exposure of personal data.
- **No retaliation:** Do not use the framework to harass, threaten, or punish critics.

NovaGaia should also be willing to review its own claims, token disclosures, operational decisions, and public reports. The principle is: **"Don't trust us. Verify us too."**

9. Community Structure and Participation

The locked community structure is:

Member → Scout → Researcher / Educator → Guardian → Core Council

The roles describe a proposed progression of contribution and responsibility, not an entitlement based on token ownership or popularity.

- **Member:** Learns, participates, discusses, and may submit reports.
- **Scout:** Notices potential threats and brings useful observations forward; a Scout does not declare guilt.
- **Researcher:** Examines evidence and documents findings.
- **Educator:** Turns research and experience into understandable learning material.
- **Guardian:** Helps protect the community, coordinate work, and support review.
- **Core Council:** Provides oversight for major policy, serious cases, appointments, appeals, conflicts, and system changes.

Authority is intended to be earned through contribution and trust. Members should not need to own NVGAI to learn or contribute. Role criteria, appointment procedures, voting rules, and the precise division of governance powers require transparent implementation as the community develops; this document does not claim that a complete on-chain or community voting system is currently operational.

Trusted contributors must also be accountable. Concerns about abuse of role, conflicts of interest, or poor conduct should be reviewable, with proportionate outcomes such as guidance, temporary restriction, or role removal where justified.

10. Growth and Sustainability Philosophy

NovaGaia's growth principle is:

Don't manufacture members. Develop contributors.

The intended growth loop is:

Discover → Join → Learn → Contribute → Earn Trust → Belong → Invite

Useful research, education, community participation, and a reliable correction process should create value independent of short-term token market performance.

The sustainability philosophy is based on:

16. Value: Build useful research, educational resources, case studies, and intelligence records.
17. People: Develop contributors, researchers, educators, and trusted community protectors.
18. Funding: Explore transparent treasury use, voluntary support, and potentially future technology services.
19. Governance: Progressively broaden oversight and participation as systems mature.

Potential future services could include advanced analytics, dashboards, monitoring, alerts, API access, research tools, and historical datasets. These are future possibilities, not promises that such services are already available. Core public safety information should remain accessible where practical.

Never sell trust: No payment should buy a favorable score, erase a report, hide evidence, or secure a "safe" label.

11. NVGAI Token

11.1 Role

NVGAI is the NovaGaia ecosystem token. NovaGaia's mission and community are broader than the token. The website describes NVGAI as supporting long-term ecosystem growth, transparency, community participation, and sustainable development.

11.2 Publicly Disclosed Token Details

Field	Website disclosure
Network	Solana
Decimals	6
Maximum supply	1,000,000,000 NVGAI
Contract / mint address	7gTRGxdbJdyefr3YU8mnrUJxAqjxQfeZ7UjCiYQoWray

Verify the mint address and current token data directly on-chain before interacting with the asset. This document records the website's disclosure and does not independently certify token balances, authorities, liquidity, market status, or current circulating supply.

11.3 Allocation

Allocation	Percentage	Amount
Public Launch & Liquidity	75%	750,000,000 NVGAI
Ecosystem	10%	100,000,000 NVGAI
Treasury	10%	100,000,000 NVGAI
Marketing	5%	50,000,000 NVGAI
Total	100%	1,000,000,000 NVGAI

The Public Launch & Liquidity allocation is described as 100% available at launch. The Ecosystem, Treasury, and Marketing allocations are described as 100% locked at launch and released gradually over 24 months. These are the website's stated allocation and vesting descriptions; readers should verify the applicable on-chain arrangements and current balances independently.

11.4 Allocation Wallets Disclosed on the Website

Treasury wallet

Allocation: 100,000,000 NVGAI (10%)

5qdcCaSD55fGxpE5CqcNZfFVVuYr5VgXkAZTApr3QtxA

Ecosystem wallet

Allocation: 100,000,000 NVGAI (10%)

4xPDbfewZsnjLimQZa1aRu3em7x7YP6hHeyCjpATMYM5

Marketing wallet

Allocation: 50,000,000 NVGAI (5%)

GiEeNQo4Zp8NB6b6kjqUz3sZNQfsv9pfrbFj25FnLtcq

11.5 Utility: Current Disclosure vs. Future Intent

The project describes ecosystem support, community participation, education, innovation, and development as goals for NVGAI. Future possibilities discussed in the project's planning include contributor recognition or rewards, ecosystem participation, governance mechanisms, research initiatives, and educational campaigns.

These should be treated as **intended or potential future utilities unless and until they are implemented and publicly documented**. This whitepaper does not promise that holding NVGAI provides governance rights, revenue, access, rewards, or any financial return. Participation in NovaGaia's learning and community activities should not require purchasing NVGAI.

12. NovaPX1 — The Guardian of NovaGaia

NovaPX1 is the Guardian identity and mascot associated with NovaGaia. It represents protection, awareness, and community-driven intelligence, and helps make serious safety and research topics approachable.

The website lists a separate Solana contract address for NovaPX1:

5PEyzvHSLGJgHFm8kheKfZRiMpwV2mbkAts8X73ipump

NovaPX1 and NVGAI are distinct assets with different contract addresses. NovaPX1's Guardian identity does not make it the same token as NVGAI, and the mascot is distinct from human community members who may earn a Guardian role. Verify the address and asset details independently before interacting.

13. Technology and Development Status

NovaGaia's website currently presents its identity and educational content, NVGAI token disclosures, wallet transparency information, a threat-report submission flow, and a public introduction to Operation Blacklist. The project's development history also includes an administrative threat-report workflow and an Operation Blacklist investigator interface.

A working submission form or private administrative dashboard is not the same as a complete public intelligence platform. In particular, the following should be described as developing or planned unless their public release and functionality have been verified:

- A complete public, searchable Threat Intelligence Database.
- Fully automated token analysis and monitoring.
- A production-grade, automated Risk Score engine.
- Public case browsing, evidence views, and complete case histories.
- Contributor reputation, role progression, and reward systems.
- Community governance and voting mechanisms.
- Telegram integrations, alerts, APIs, and advanced analytics.

NovaGaia should publish feature status clearly and update this section as capabilities become operational.

14. Roadmap and Evolution

The website's roadmap describes four broad phases:

20. Foundation & Launch: Official website, whitepaper, community channels, early NVGAI supporters, and introduction of the AI vision.
21. Community Growth: Community expansion, campaigns, education initiatives, collaborations, and preparation of a governance framework.
22. AI & Blockchain Ecosystem: Exploration of AI-powered tools, future Web3 utilities, digital identity concepts, and blockchain ecosystem opportunities.
23. Global Intelligence Network: Potential partnerships, sustainable technology initiatives, innovation programs, and long-term ecosystem development.

Separately, NovaGaia's intelligence-development vision is to move from community foundations toward more developed threat intelligence, risk intelligence, knowledge resources, automation, and a public intelligence platform.

Roadmap items are goals, not guaranteed delivery dates or assurances. Completed items should be distinguished from work in progress and future proposals.

15. Risk Factors

Participation in cryptoassets and early-stage technology projects involves substantial risks, including but not limited to:

- **Market risk:** Prices can fluctuate sharply; an asset may lose most or all of its value.
- **Liquidity risk:** Trading may be limited, spreads may widen, and exits may cause substantial price impact.
- **Token and authority risk:** Token settings, administrative powers, or other controls may affect holders.
- **Smart-contract and technical risk:** Bugs, exploits, compromised keys, infrastructure failures, or malicious behavior may cause losses.
- **Information risk:** Public statements, third-party data, and community reports may be incomplete, outdated, inaccurate, or manipulated.
- **Assessment risk:** Risk scores and investigations can contain errors and cannot guarantee safety or predict future behavior.
- **Operational risk:** Development may be delayed, changed, discontinued, or unable to deliver planned features.
- **Regulatory risk:** Laws and regulatory interpretations vary by jurisdiction and may change.
- **Custody and user risk:** Users can lose assets through compromised wallets, phishing, unsafe signatures, mistaken transfers, or loss of recovery credentials.
- **Conflict-of-interest risk:** Token holdings, partnerships, promotions, or financial relationships may create incentives that require disclosure and scrutiny.

No audit, review, risk score, wallet disclosure, or community label eliminates these risks.

16. Legal and General Disclaimer

This whitepaper is a project overview, not an offer document, prospectus, or solicitation to purchase any token. Nothing in it is financial, investment, legal, tax, or professional advice. No statement guarantees profit, appreciation, liquidity, safety, listing, adoption, or future utility.

Digital assets may be restricted or treated differently under the laws of different jurisdictions. Readers are responsible for understanding and complying with applicable laws and for obtaining independent professional advice where appropriate.

Forward-looking statements—including plans, goals, proposed utilities, roadmaps, and future services—are subject to uncertainty and may change or never be completed. Token holders should not assume that they have ownership, governance, redemption, revenue, or other rights unless those rights are expressly established in applicable official documentation and law.

Use official links and verify contract addresses independently. Beware of impersonators and unofficial accounts.

17. Official Links and Identifiers

- **Website:** https://novagaia-jade.vercel.app/
- **X:** https://x.com/NovaGaia_NVGAI
- **Telegram:** https://t.me/NovaGaiaCommunity
- **NVGAI Solana address:** 7gTRGxdbJdyefr3YU8mnrUJxAqjxQfeZ7UjCiYQoWray
- **NovaPX1 Solana address:** 5PEyzvHSLGJgHFm8kheKfZRiMpwV2mbkAts8X73ipump
- **Public project contact shown on website:** novagaiaofficial@gmail.com

Always confirm that a link or address is current through the official website before use.

18. Closing Statement

NovaGaia is being built around a simple idea: people should have better tools, stronger habits, and a community that values evidence when navigating crypto.

The project's ambition is larger than a token. It is to develop a community that learns, reports, investigates, corrects mistakes, and turns scattered observations into useful intelligence.

Protect. Research. Learn.

Don't trust the hype. Verify the evidence.

One Planet. One Intelligence. One Community.
